

# ID-AL My Video Player VP320 / VP330 and Event Video Player EVP380

## Manuel firmware update guide V1.0

### 1 Introduction

This guide explains how install a firmware update for the My Video Player VP320 / VP330 and Event Video Player EVP380 players with a removable storage medium.

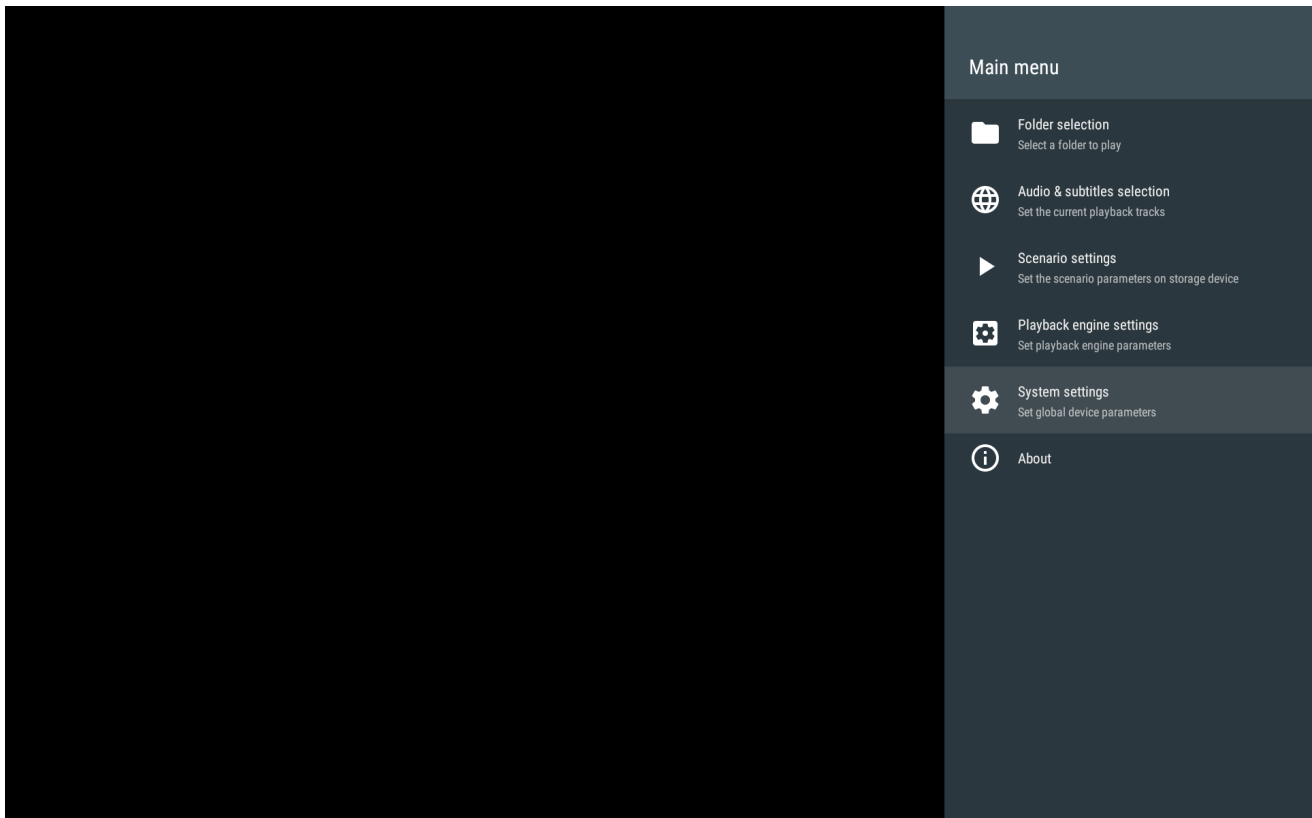

1. Download the firmware update file form the support page of the product on [www.id-al.com](http://www.id-al.com).
2. Unzip the firmware update file on a USB flash drive.

The firmware update is composed of two files with `zip` and `json` extensions:

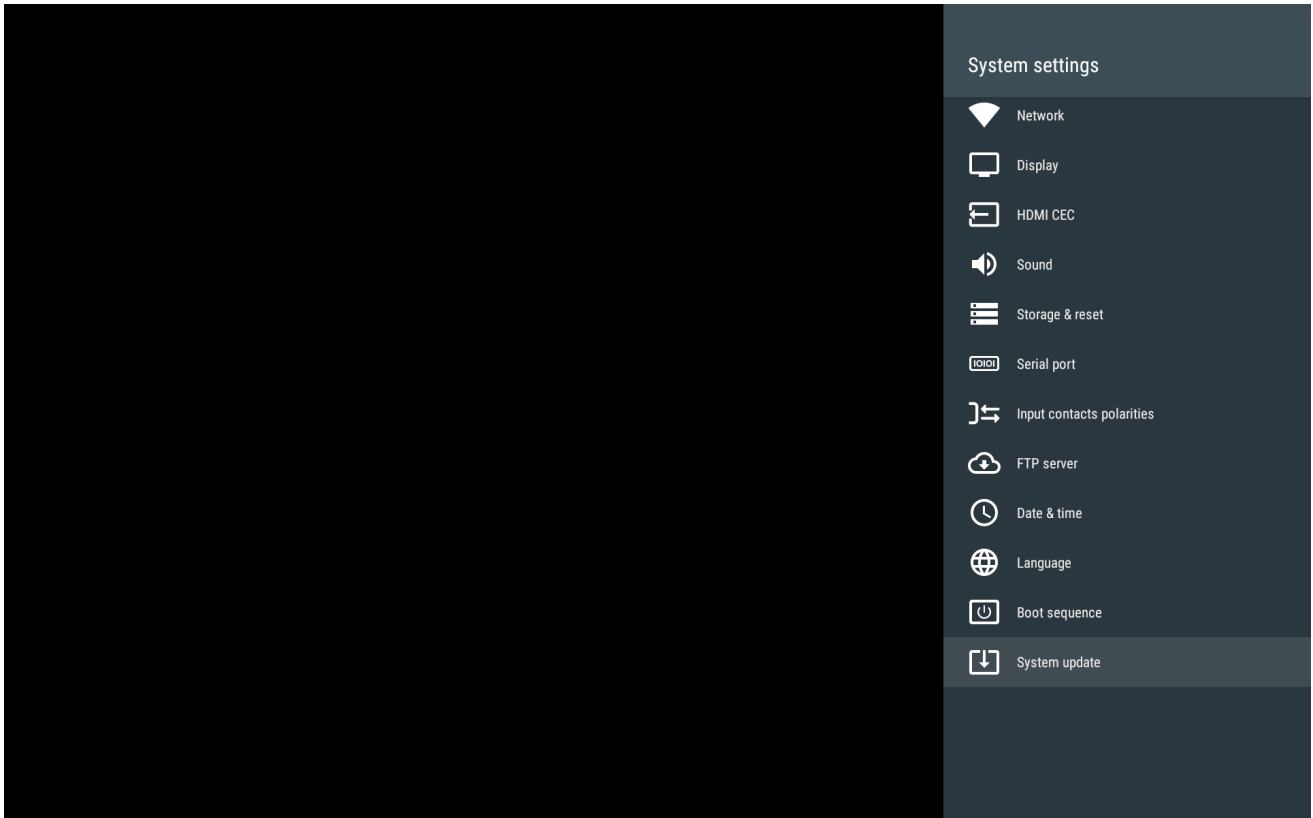

- `vp3xx-full-update-vx.xx.zip`
- `vp3xx-full-update-vx.xx.json`

The sequence of characters `x.xx` into the name of file indicates the version number of the firmware that will be installed (example: `vp3xx-full-update-v1.04.zip` and `vp3xx-full-update-v1.04.json`)

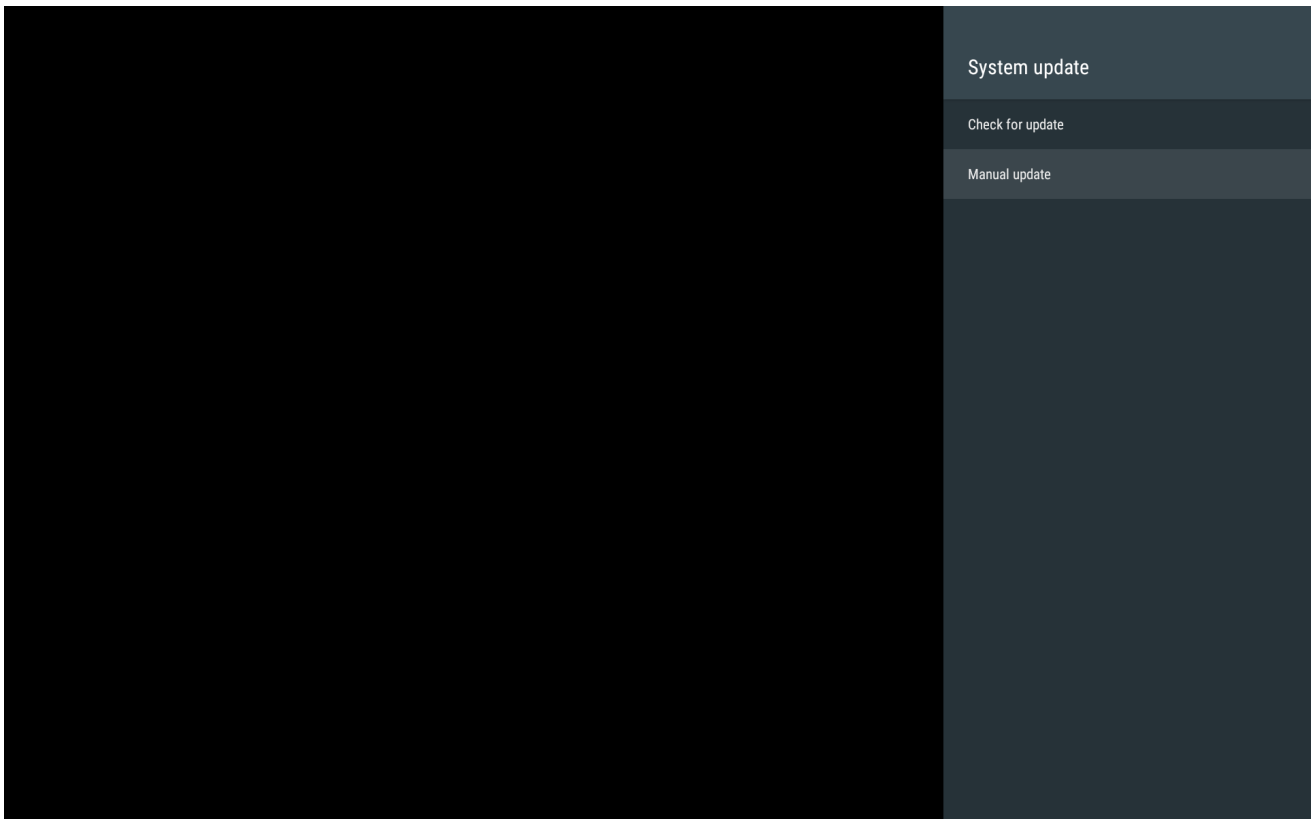

3. Insert the USB flash drive into the video player.
4. Press  on the remote control and select `System settings`.

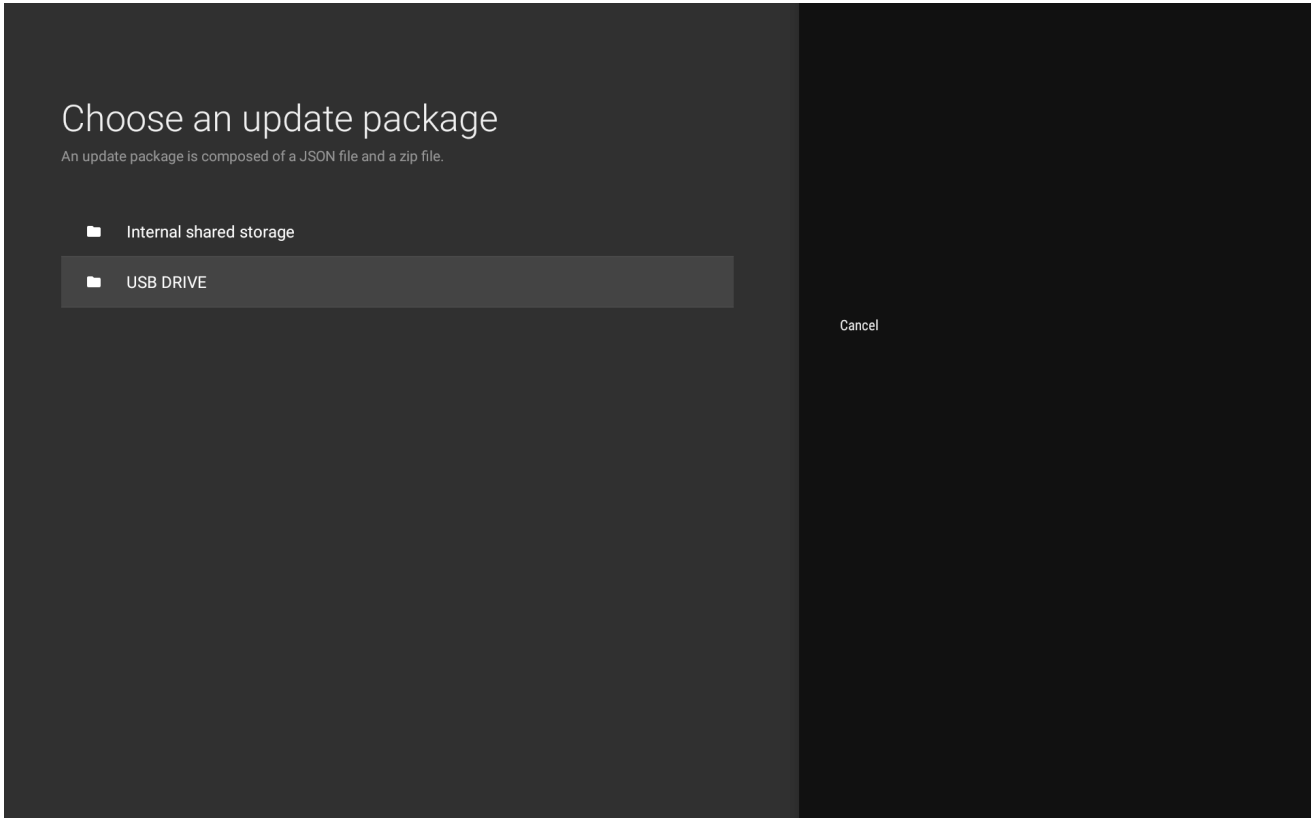

**5. Select System update.**

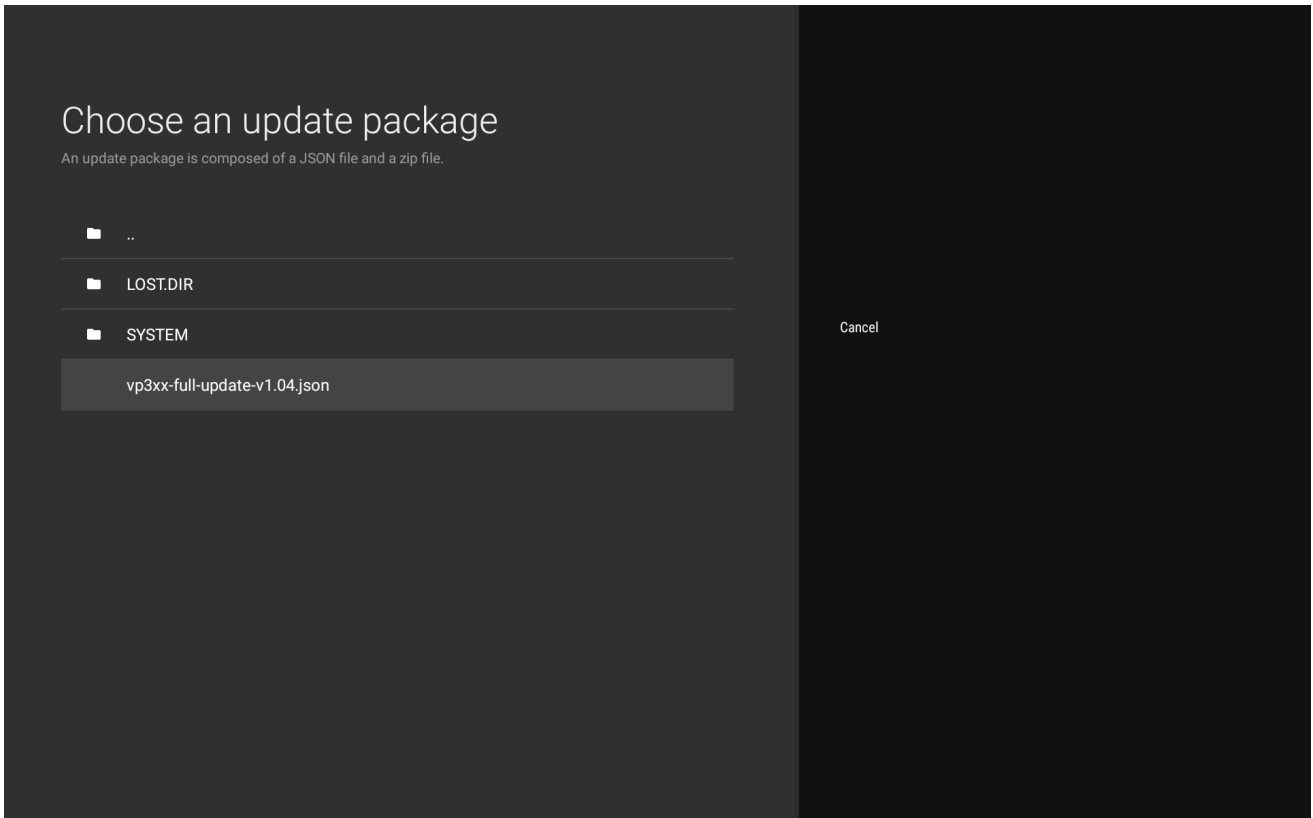

**6. Select Manual update.**

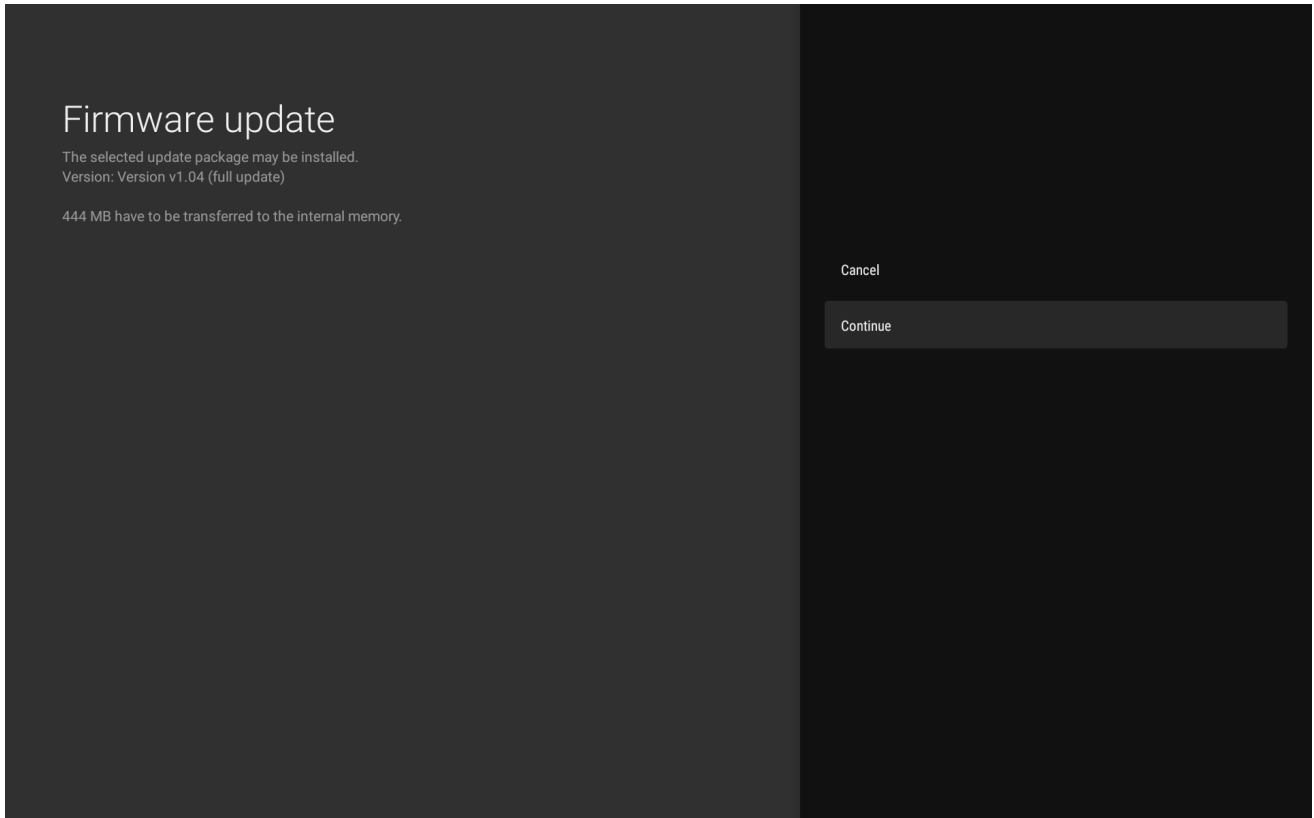

**7. Choose the USB flash drive and if necessary the folder containing the update firmware files.**

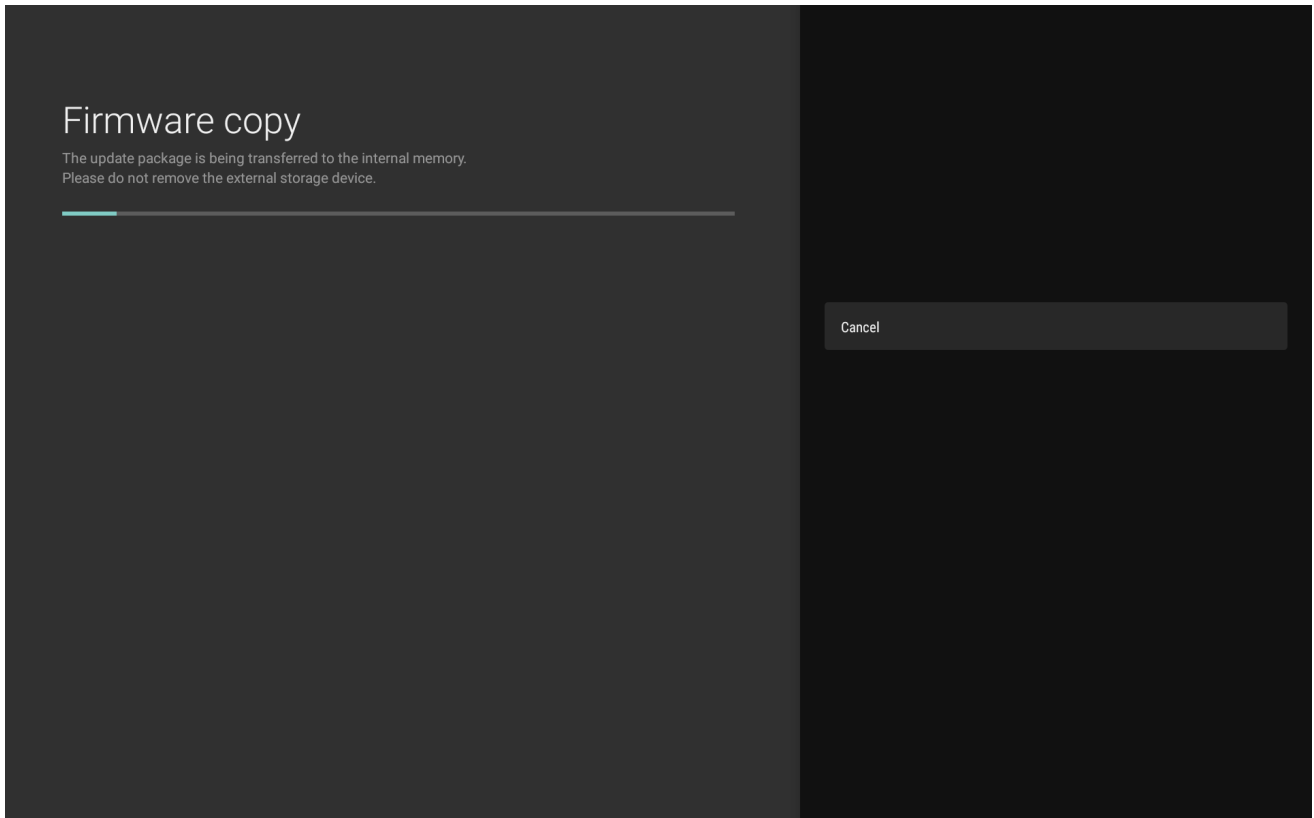

**8. Select the `.json` update file and press the `OK` button on the remote control.**

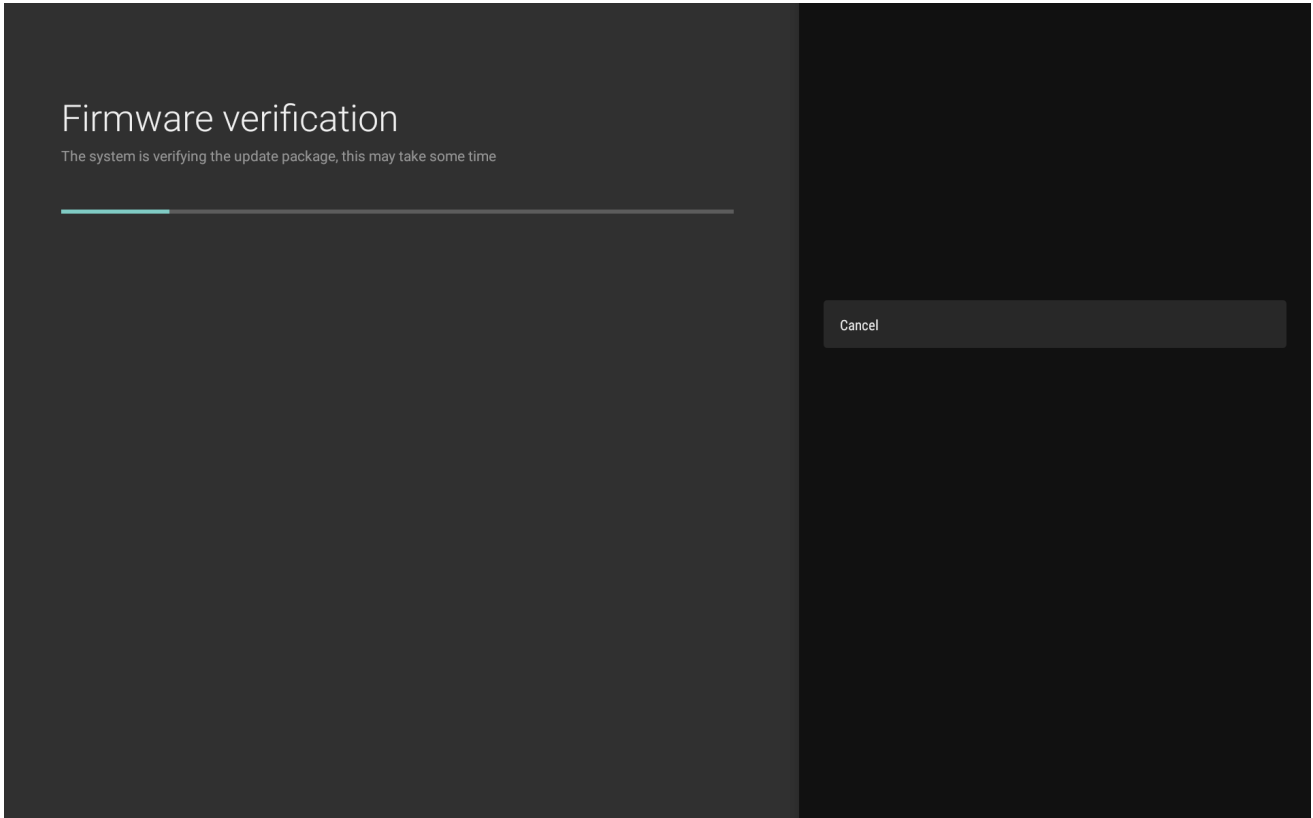

**9. Select Continue.**

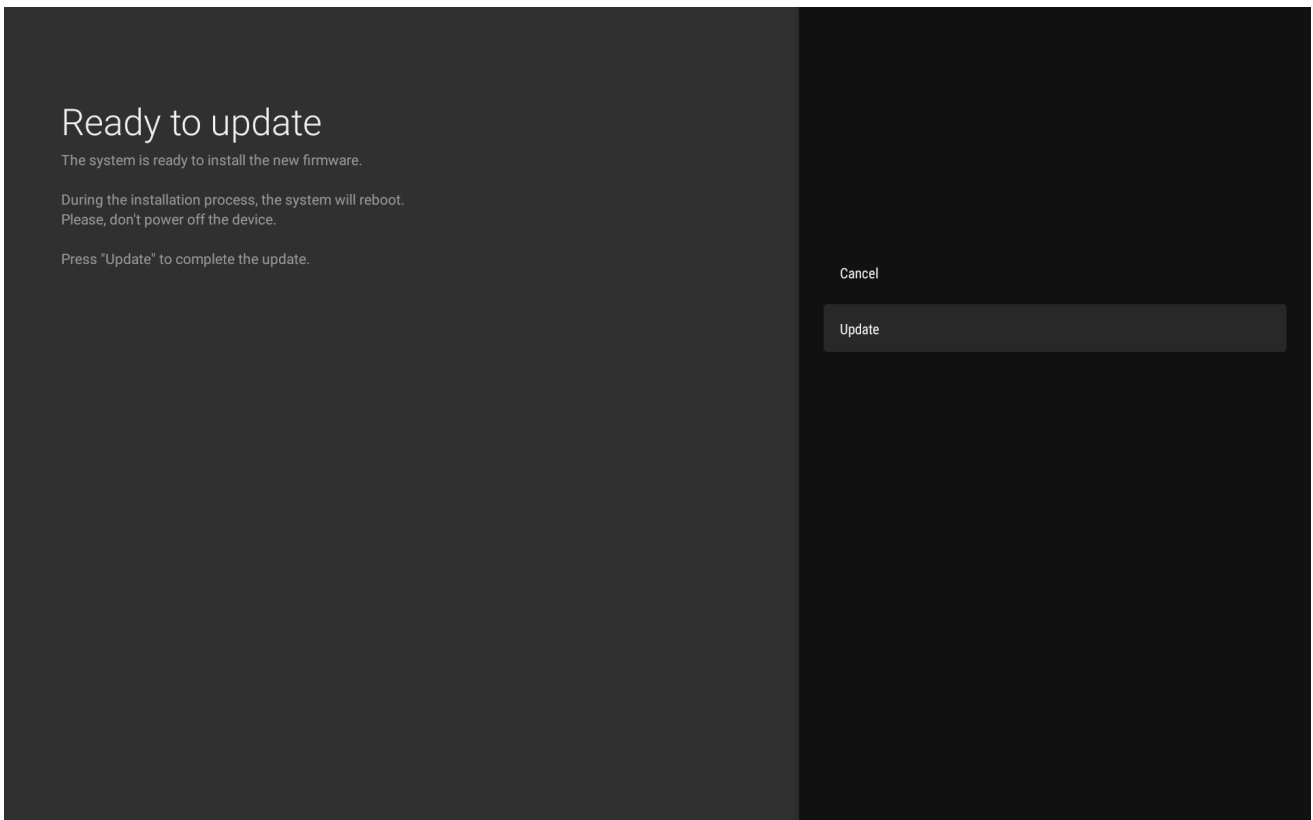

**10. Wait until the update copy is complete.**

**11. Wait until the update check is complete.**

**12. Select Update.**

**13. Wait until the update install is complete.**

The system reboots and installs the update, do not turn off the device during the procedure...
